

Senior Systems Analyst/Engineer – Infrastructure and Application Development

Do you have a mix of both infrastructure and application development experience? Are you looking for a position where you can contribute both in this hybrid role?

Iroquois is hiring a Senior Systems Analyst/Engineer who has solid experience working across application development and infrastructure teams in IT.

This role works with business units and IT staff to design, architect, administer and maintain the company's servers and desktop solutions. The individual will also be responsible for planning, designing, programming and implementing systems in support of the business.

This position reports to the Manager, Enterprise Application Services and will work in close collaboration with the Engineering, Field Operations and IT staff.

Microsoft Active Directory, Citrix XenApp servers, systems backup and recovery, server & desktop security, high availability applications (SCADA), multi-user server based computer systems and applications software. Ensures internal network security, and protects against unauthorized access through the implementation of security software, policies and monitoring procedures.

Your responsibilities in this role

- Provide analysis and programming support and maintain operational integrity of critical business systems (SCADA).
- Plan and test disaster recovery (BIC) support of IT for entire company
- Ensure operational availability and performance objectives of the corporate business systems are met
- Develop, plan and execute disaster recovery (BIC) tests for supported server technologies
- Provide support of over 100 servers and network support for approximately 100 people across 9 locations

What we are looking for? What experience do you need?

Practical hands on working experience with the following:

- Project management, knowledge of project lifecycle, ability to design and execute project plans, develop project charters and scope documents.
- Operating Systems, Server Software
- Microsoft Windows Server 2008 R2/2012 R2, Active Directory, web and email services, Citrix XenApp 7.1, VMware vSphere 6.5, Windows 7/10, TCP/IPv4, TCP/IPv6, DNS, DHCP, WSUS, Dell EMC Networker 9.2 & Data Domain backup solutions.
- Hardware
- Dell PowerEdge servers, Dell Optiplex desktop PCs, Dell Latitude notebook PCs, Dell EMC Data Domains

What else?

A Bachelor's degree and at least 2-5 years of practical experience in the areas of:

- Application Development
- Help Desk or Desktop Management
- Windows Server 2008 (or later) installation and management
- Active Directory management and configuration

Our facility is located in an attractive campus like corporate setting with easy access to the highway, plenty of parking and lots of amenities: on-site fitness facility, walking paths, several cafes' and much more.
